班級: ___年___班 座號: ___號 姓名: _____ 觀看日期: ___年___月___日

- ◆ 全部答對及 50 字心得才算完成一篇英文閱讀。
- ◆ 學藝股長請按照座號排列好，
4/1(五)前交至設備組。

文章主題：Climate Change is Creating 'Sea Snot'

文章日期：2022.02.17 [請點選網頁右上角](#)

The ocean is beautiful, but there can be a lot of gross things in it.

大海很美，但裡面可能有髒東西。

Things like plastic, garbage, and... sea snot? Sea snot is what it sounds like: a goeey, slimy thing that is in the sea.

Sea snot 是海裡黏糊糊的東西，跟鼻涕一樣。

It's growing because of climate change. Climate change is causing a lot of areas in the ocean to become warmer. When this happens, tiny, little organisms that live in the water start growing out of control. 氣候變遷讓海水的溫度升高，有一些區域的有機體就大量生長。

Organisms are very, very, very small living creatures that you need a microscope to see. 有機體是很小很小的生物，用顯微鏡才看得到。

And sometimes these little organisms let out a sticky goo that gets all stuck together and this creates... sea snot. 這些微小生物有時候會分泌黏黏的液體，形成海洋鼻涕。

Even worse, sea snot traps all the garbage and gross things in

the ocean in all of its stickiness. **海洋鼻涕還會黏住垃圾，變成更噁心的汙染物。** Right now, sea snot hasn't polluted all the seawater around the world, but that might change if we don't protect our planet. **目前海洋鼻涕還沒有汙染全部大海，但是不保護地球，遲早就會發生。** We need to work together to make sure we keep our Earth clean.

<Quiz>
